Overview

Overview

Industrial Robots

### Logistics

Image courtesy: BIBA

Automotive

Image courtesy: Mercedes Benz Bremen

- Extremely heavy, precise and dangerous, not really smart
- Mostly no sensors, only high-precision motor encoders
- Programmable through PLCs (using block diagrams or Pascal / Basic like languages)

Medicine:

Copyright: Intuitive Surgical

Automotive:

Copyright: KUKA Roboter GmbH

- Very precise, moderately dangerous, somewhat smart
- High-precision motor encoders, sometimes force sensors, cameras
- Native programming and simulation tools (C++, Java, Python, GUIs)

# Service Robots

Autonomous aircrafts

Courtesy DJI

Mobile platforms

Courtesy NASA/JPL-Caltech

Manipulation platforms

Humanoids

- Usually not very precise
- Not really dangerous
- Usually cognition-enabled
- Equipped with lots of sensors
- Usually running Linux

6

Service Robots with Light-weight Arms

DLR Justin

TUM Rosie

Courtesy of DLR
- Moderately precise and dangerous
- Cognition-enabled
- Equipped with lots of sensors
- Usually running a combination of a real-time and non real-time OS.

ROS Build System

Packages and Metapackages

- *Packages* are a named collection of software that is built and treated as an atomic dependency in the ROS build system.
- *Metapackages* are dummy "virtual" packages that reference one or more related packages which are loosely grouped together

Similar to Debian packages.

Actually released through the Debian packaging system.

The following examples are inspired by the official documentation:
https://docs.ros.org/en/jazzy/Tutorials/Beginner-Client-Libraries.html

ROS Workspace build with colcon

```
$ source /opt/ros/jazzy/setup.bash
```

Packages are stored in ROS workspaces. Create a workspace:

```
$ mkdir -p /ros_ws/src
$ cd /ros_ws/src
```

- Get an example package:
  ```
  $ git clone https://github.com/ros/ros_tutorials.git -b jazzy
  ```

- Install dependencies with *rosdep*:
  ```
  $ cd ..
  $ rosdep install -i -from-path src -rosdistro jazzy -y
  ```

- Build the workspace:
  ```
  $ colcon build
  ```
  $ ls $\rightarrow$ build install log src

- Source your workspace:
  $ ros2 pkg prefix turtlesim $\rightarrow$ /opt/ros/jazzy
  $ source install/local_setup.bash $\rightarrow$ *local* overlay on top of *jazzy/setup.bash*
  $ ros2 pkg prefix turtlesim $\rightarrow$ /home/<user>/ros_ws/install/turtlesim
  $ ros2 run turtlesim turtlesim_node $\rightarrow$ runs the local code

ROS Workspace Create new Package

```
$ cd /ros_ws/src
```

- Create a package with **ament_python**:
  ```
  $ ros2 pkg create --build-type ament_python --license Apache-2.0 --node-name my_node my_package
  ```
- Compiling a package:
  ```
  $ cd .. && colcon build
  ```
- Update ROS filesystem for new package:
  ```
  $ source install/local_setup.bash
  ```
- Run the new node
  ```
  $ ros2 run my_package my_node
  ```
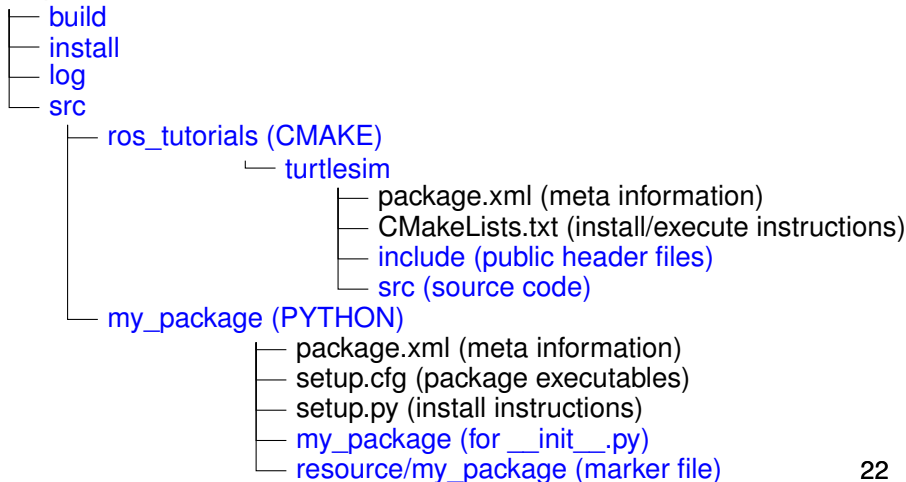

Naming convention: underscores (no CamelCase, no-dashes)!

$\rightarrow$ Multiple workspaces chained together.
$\rightarrow$ source *local_setup.bash* for additive overlay or *setup.bash* for global overwrite

Node Discovery

Terminology

- **Nodes** are processes that produce and consume data
- **Parameters** are persistent data stored on parameter server, e.g. configuration and initialization settings
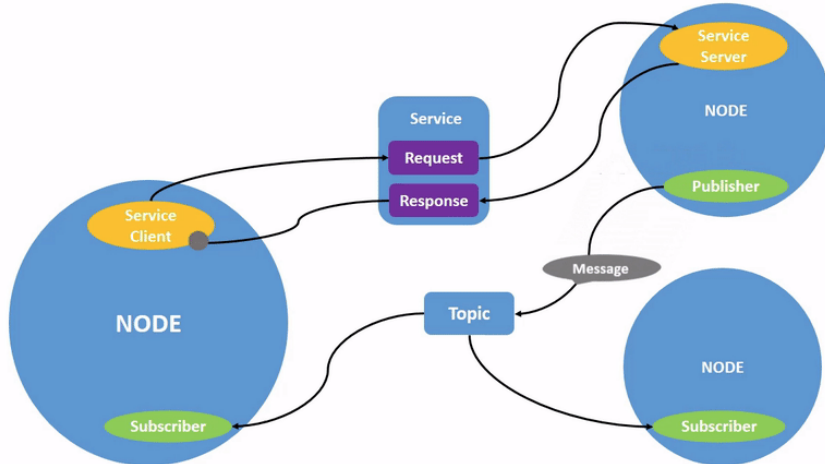

Node communication means:

- **Topics**: asynchronous many-to-many "streams-like"
  - Strongly-typed (ROS .msg spec), see `$ ros2 interface list`
  - Can have one or more *publishers*
  - Can have one or more *subscribers*
- **Services**: synchronous blocking one-to-many "function-call-like"
  - Strongly-typed (ROS .srv spec)
  - Can have only one *server*
  - Can have one or more *clients*
- **Actions**: asynchronous non-blocking one-to-many "function-call-like"
 - Built on top of topics but can be canceled

Node communication

Node communication [2]

Node communication [3]

Tools

- `ros2 node`: gives the user information about a node

  $ ros2 node -h

  info, list

- `ros2 topic`: gives publishers, subscribes to the topic, datarate, the actual data

  bw, delay, echo, find, hz, info, list, pub, type

- `ros2 service`: enables a user to call a ROS Service from the command line

  call, echo, find, info, list, type

- `ros2 interface`: gives information about message types

  list, package, packages, proto, show

- `ros2 wtf`: diagnoses problems with a ROS network

- more with `ros2 -h`

ROS Graph

- Start the turtle simulation:

  ```
  $ ros2 run turtlesim turtlesim_node
  ```

- Start teleoperation:

  ```
  $ ros2 run turtlesim turtle_teleop_key
  ```
- Publish turtle1 position to /tf:

  ```
  $ ros2 run turtle_tf2_py turtle_tf2_broadcaster -ros-args -p turtlename:=turtle1
  ```

  See also https://design.ros2.org/articles/ros_command_line_arguments.html

- Examining the ROS Graph:

  ```
  $ rqt_graph
  ```

Launch Files

See the docs:
https://docs.ros.org/en/jazzy/Tutorials/Intermediate/Launch/Creating-Launch-Files.html
Config files for launching nodes:

- as XML, YAML or Python
- automatically set parameters and start nodes with a single file
- hierarchically compose collections of launch files
- automatically re-spawn nodes if they crash
- change node names, namespaces, topics, and other resource names
- without recompiling
- easily distribute nodes across multiple machines

ROS API

ROS API provides the programmer with means to

- start ROS node processes
- generate messages
- publish and subscribe to topics
- start service servers
- send service requests
- provide and query action services
- find ROS packages
- ...

ROS APIs: `rclcpp`, `rclpy`

Results - Less Lecture, more Tutorium

Lecture: 12:15 to 13:30
Lunchbreak
Tutorium: 14:15 to 15:45

- 1/2 can start earlier
  $\rightarrow$ not enough to start earlier.

- 1/3 each want lunch or continue quickly
  $\rightarrow$ having lunch is more important that saving time.

- 2/3 can stay until 15:45, 1/6 leaves earlier, 1/6 can't stay
  $\rightarrow$ I assume the 1/3 want to go to SECORO, which should be fine now (?)

Assignments RPWR

- Assignment 2 still ongoing:
